

If you still love to shop offline, still shop from store, believe on the product after look and feel then **QUICKSHOP** may be just the bare bones service you need. **QUICKSHOP** is an offline utility app which helps you while shopping through the supermarket. Where you just need to scan the barcode of the product and just walk through. And after completing your shopping choose b/w home delivery or pickup. That's how we come up with following benefits for User and store as well.

- *Reduce shoplifting*
- *Hassle free shopping*
- *No need to carry your products within the store.*
- *Never get over your shopping budget.*
- *Never lose any offers on the product or your bill amount.*

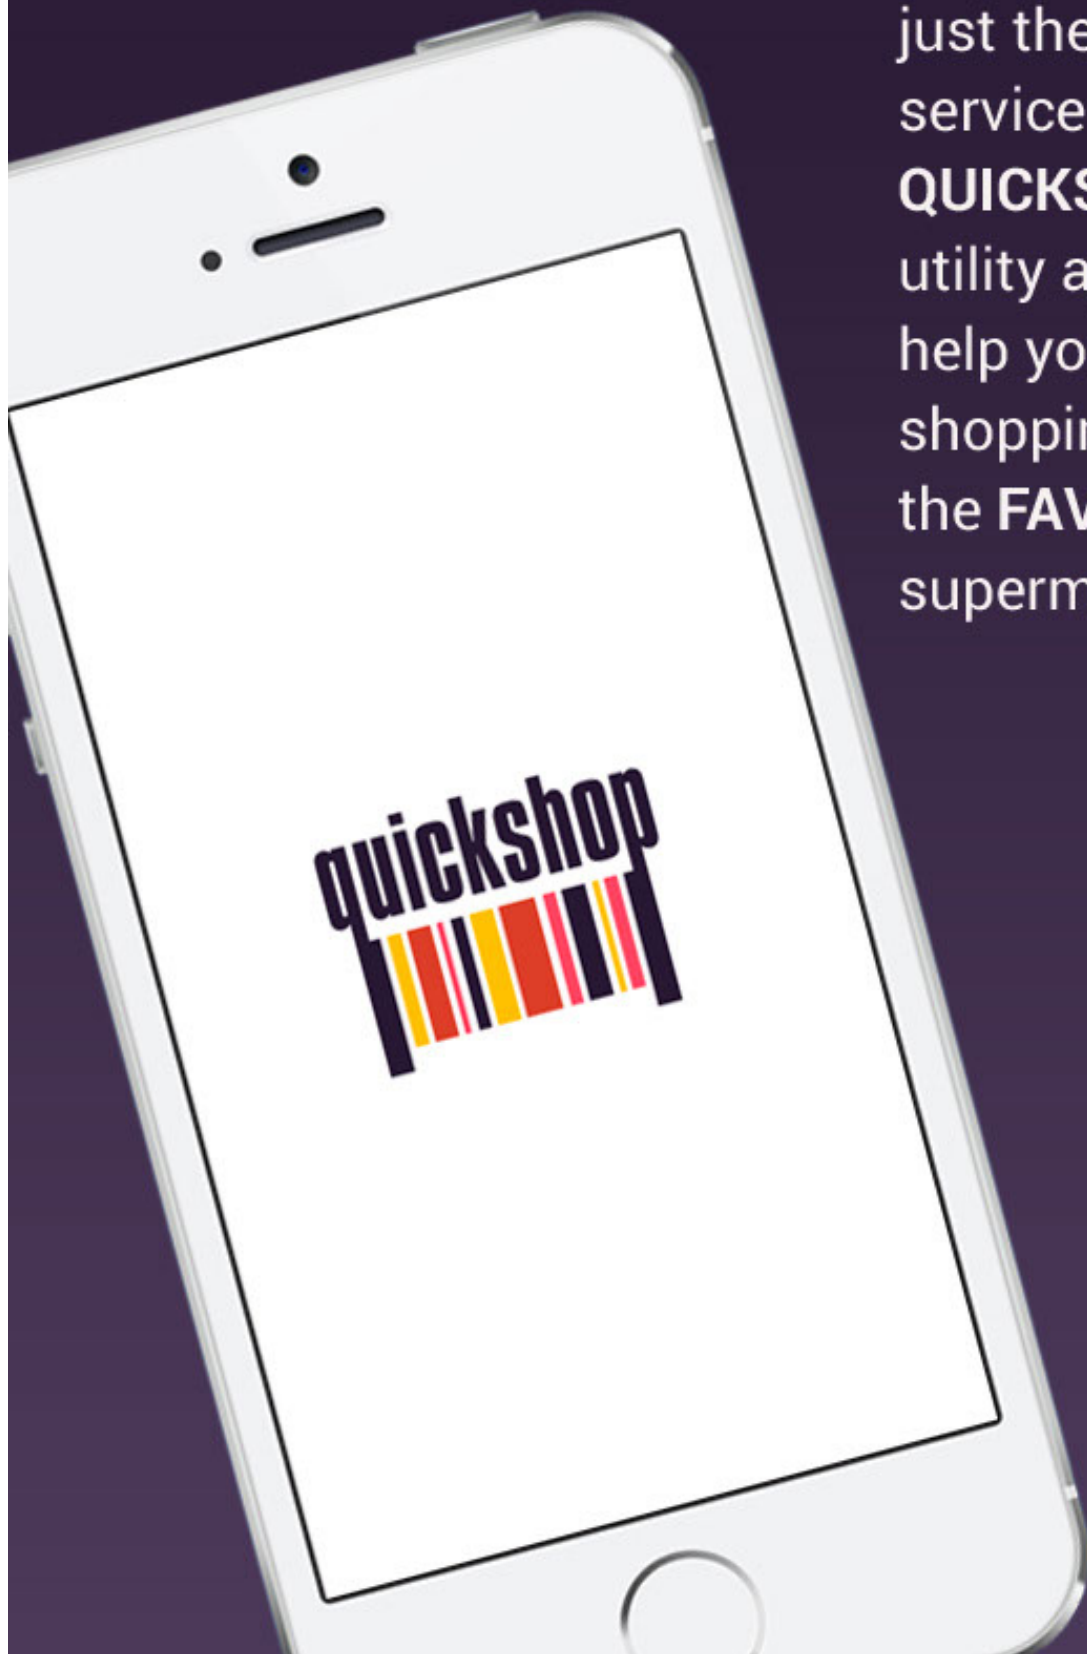

This usually happens that we miss the offer on the product, Even some of the time we miss the offer on the billing amount. For example the store made campaign that if you buy product worth 2500 or more you will get a discount of 10%. And user doesn't have a clue about his buying till the time he reaches the point of sale. This type of things become a story of the past. Never lose the offers.

- *Get the Analytic data, age group, area of interest and out of stock product on the go.*
- *Loyalty programs*
- *Know your loyal customers.*
- *Post offers of customers interest.*
